Inspector Notes

A utility line of Vetch it would have or present as 20 to 30% Straw through each bale inconsistently. I don't think it's that much but it presents that way excellent shedding and the Vetch that's in the bale. It's very good Batch you need to focus on the Feed test. And the amount of Straw in each bale is quite inconsistent so some bales have quite a lot. Some have hardly any so it's inconsistent.
